Key: Find the range that includes the difference in yardage between the rated tees and the unrated tees. The first column to the right is the change in *USGA Course Rating*, and the second column to the right is the change in *Slope Rating*. If the unrated tees are longer than the rated tees, their ratings are higher; if the unrated tees are shorter, their ratings are lower.

Key: Find the range that includes the difference in yardage between the rated tees and the unrated tees. The first column to the right is the change in *USGA Course Rating*, and the second column to the right is the change in *Slope Rating*. If the unrated tees are longer than the rated tees, their ratings are higher; if the unrated tees are shorter, their ratings are lower.

Add the resulting table values to the ratings of the nearest set of tees rated for the appropriate gender if the unrated tees are longer than the rated tees, or subtract the resulting values if the unrated tees are shorter than the rated tees.

This method may also be used if a player plays a combination of tees. The player first determines the total yardage played then applies the above procedure.

If the Committee in charge of a competition has used a combination of tees for a competition course, this procedure may be used. This procedure is not a substitute for a formal *USGA Course Rating* and *Slope Rating*.

For a nine-hole adjustment, the proper procedure is to use the actual yardage difference for the adjustment to the *USGA Course Rating*, and double the yardage difference to find the appropriate *Slope Rating* adjustment.
